

CONCURRENT STRETCH WRAPPING

TopTier is the global leader in palletizing systems with **built-in concurrent stretch wrapping**—a patented solution that saves floor space, reduces consumable use, and lowers overall end-of-line costs.

Unlike traditional setups that require separate wrapping machines, TopTier's integrated design wraps each load as it's built, stabilizing it immediately and streamlining your packaging process.

Why Concurrent Stretch Wrapping?

Space Saving: The stretch wrapper is built directly into the palletizer—no extra floor space required.

Cost Efficient: Eliminates the need for a separate wrapper and reduces the use of tie sheets.

Faster Line Throughput: Loads are ready for transport directly from the palletizer.

Improved Load Stability: Wrapping during the build process locks unstable or interlocked loads into place immediately.

Automatic Recovery: In case of film breakage, the system overwraps the affected section without stopping production or requiring operator input.

Patented Technology for Real-World Results

TopTier's stretch wrapping is optimized for palletizer integration, delivering consistent wrap performance with no impact on throughput. The system is designed for reliability, enabling continuous palletizing operations without interruptions—making it ideal for high-demand environments. Even if film breaks during wrapping, the machine automatically detects, corrects, and resumes operation, ensuring load retention without downtime.

-  **Efficient film usage (less film needed due to stretch).**
-  **Stronger containment (film tension holds the load better).**
-  **Consistent wrapping even for irregularly shaped loads.**

Concurrent Stretch Wrapping Option

Film dispensing is based on load size and load position. Higher film pre-stretch is achieved with improved reliability and load containment.

Smarter Design. Smaller Footprint. Bigger ROI.

By integrating stretch wrapping directly into the palletizer, TopTier delivers a compact, all-in-one solution that reduces capital equipment costs, simplifies maintenance, and shortens your line's footprint—without sacrificing performance.

Film Break Auto-Recovery Standard

Stretch wrapping technology automatically recovers from film break without interruption or operator intervention.

TopTier's concurrent stretch wrapping technology redefines what efficient end-of-line packaging can look like.
